Senior Solutions Architect

About RenPSG

RenPSG provides complete philanthropic solutions through technology-enabled business services including cloud apps, consulting, and administration. We provide technology and service so our clients can focus on their donors' giving and their own growth.

Headquartered and operated in Indianapolis, Indiana, RenPSG is the largest independent philanthropic solutions provider in North America. With 30 years of industry knowledge and experience, RenPSG delivers custom solutions that include tax expertise, accounting support, and impeccable client service, all through our proprietary cloud computing technology. We count financial services firms, elite nonprofit organizations, and leading community foundations as our partners. Currently, RenPSG services $16 billion in assets, including charitable trusts, donor-advised funds, pooled income funds, endowments, and private foundations.

Solutions Architect

This Sr. Solutions Architect position will be responsible for managing the technical architecture for our Next Generation (NEXGEN) client's application platforms. This person must be self-motivated and results-oriented with strong programming, Portal collaboration, and Microsoft application architecture skills.

The ideal candidate will provide thought leadership on best practices for architectural design and have a thorough understanding of enterprise application integration involving Business Process, Business Intelligence, and Collaboration. This person will lead architecture and design reviews for NEXGEN .NET projects that focus on planning, deploying, and targeting new or significant modifications of existing & new enterprise implementations. This role requires a proven technical skill set that has been demonstrated in the development of enterprise Line of Business applications and their integration into heterogeneous enterprise systems.

The application architect will also be developing application platforms strategy and roadmaps, perform required R&D and provide recommendations to deliver industry standard solutions and services that meet clients business needs while ensuring a highly reliable and scalable application environment.

Responsibilities:

- Design and enforce technical and architecture standards and guidelines for Microsoft development platforms.
- Architecting solutions using latest technologies while integrating external services/applications, assist clients with business requirements for their application solutions and create the appropriate information architecture, and solution approach.
- Development of enterprise architecture/applications, MVC, REST, WCF, web services, SAML SSO solutions
- Provide technical guidance to solution architecture, design, and development for Systems Development team

- Define best practices in the critical evaluation and selection of the software components
- Promote strong combination of functional leadership and technical expertise across the team.
- Must have project management skills and be able to manage multiple projects. Work in fast- paced, high-pressure environment
- Adhere to the Change Management process and available for 3rd level production support
- Responsible for technology and code reviews, identifying, recommending and implementing 3rd party products for desired solutions
- Work and lead cross-functional teams in implementing business solutions

Knowledge, Skills and Abilities:

- Bachelor's Degree in Computer Science or related field required
- 8+ years of experience with .NET programming languages C#
